ACME VISIBLE

**Filing Systems & Accessory Equipment
for Electronic Data Processing**

Here are typical installations developed for input-output filing, to assure maximum benefits from Data Processing. Acme Visible systems and equipment keep data completely accessible and convenient to handle at a speed to match the efficiency of your Friden Flexo-writer or Computyper.

Acme Visible is the leading producer of visible record systems and filing techniques; our cumulative experience is unique in the accessory filing field. Quite often your best solutions will stem from our ability to furnish customized systems rather than some pat solution.

We are constantly making improvements in filing all types and sizes of cards, continuous forms and tapes; for input and output, for sophisticated as well as basic data processing systems.

Our experience is available as a back-up service to both the machine salesman and machine user for solving EDP filing problems. Call any of our local branch offices for first-hand assistance in working out the details . . .

ACME **VISIBLE** **RECORDS, INC.**

Motorized Acme Visible rotary puts 5,000 customer account cards within reach of every clerk in sales order department. IDP card output of Friden Flexowriter, filed in Acme Super-Visible frames with 1-inch exposed margins, shows at a glance each customer's account number, address, and shipping and billing instructions.

A 36" manual rotary adjoining Flexowriter files frequently repeated technical orders and standard letters on 7"x3" Friden edge-punched cards at U. S. Navy purchasing office.

A transcribed phone call from wholesale liquor salesman instructs operator which customer and items are to be invoiced. Double edge-punched cards filed in Super-Visible frames list all products with pertinent data—description, price, tax. These pre-punched cards are immediately available for processing through Flexowriter for an error-free invoicing.

Customer names, locations are on right of operator; products on left. While one card is being processed operator files preceding card and pulls another; no machine time lost filing and searching.

Purchasing department of a large commercial bank files Flexowriter's coded paper tapes for repetitive purchase orders in Acme Visible tray cabinets. For this operation Acme developed a tape pocket card with automatic out signal to speed refiling. Also, the card is printed to contain all the information punched into the tape so that a visual check can be made at a glance.

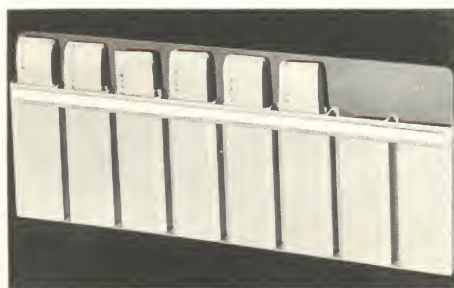

Order-processing in a manufacturing company is accelerated by Acme Veri-Visible filing system for Flexowriter edge-punched cards. The same customer's record — — code number, terms of sale, shipping instructions — — punched on the card are also typed on Veri-Visible pocket in which card is filed, to permit visual verification. Pocket's visible margin facilitates rapid finding and refiling so that manual operations keep up with Flexowriter's rapid automatic transcription of data to invoices.

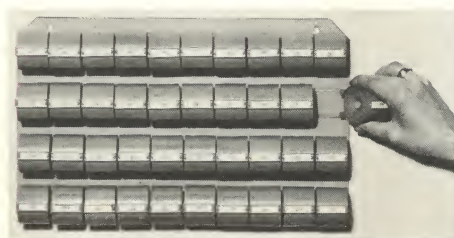

Uniformity and standardization of parts production is assured at General Electric, Waynesboro, Virginia plant, through use of tape control machines. Master tapes and transcript (containing engineering specs. punched in the tape) are controlled from a visible cabinet by the planning section of the Specialty Control Department. Tapes, ranging from 3 to 25 feet in length, are filed in special transparent acetate pockets designed for compactness, accessibility and visibility of both tape and transcript.

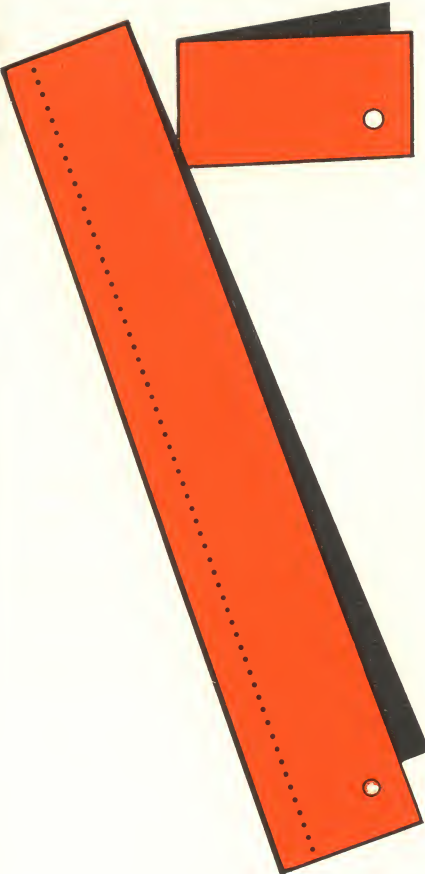

Visible tray cabinets are compact and offer fast filing and finding of tapes. Each tray is equipped with adjustable grid partitions to hold various lengths. One hundred and two tape rolls 25 feet long can be housed in one tray or 1,632 tapes per cabinet.

Eight - compartment vertical tape holders measure 12"x5" high to fit into any standard depth desk drawer.

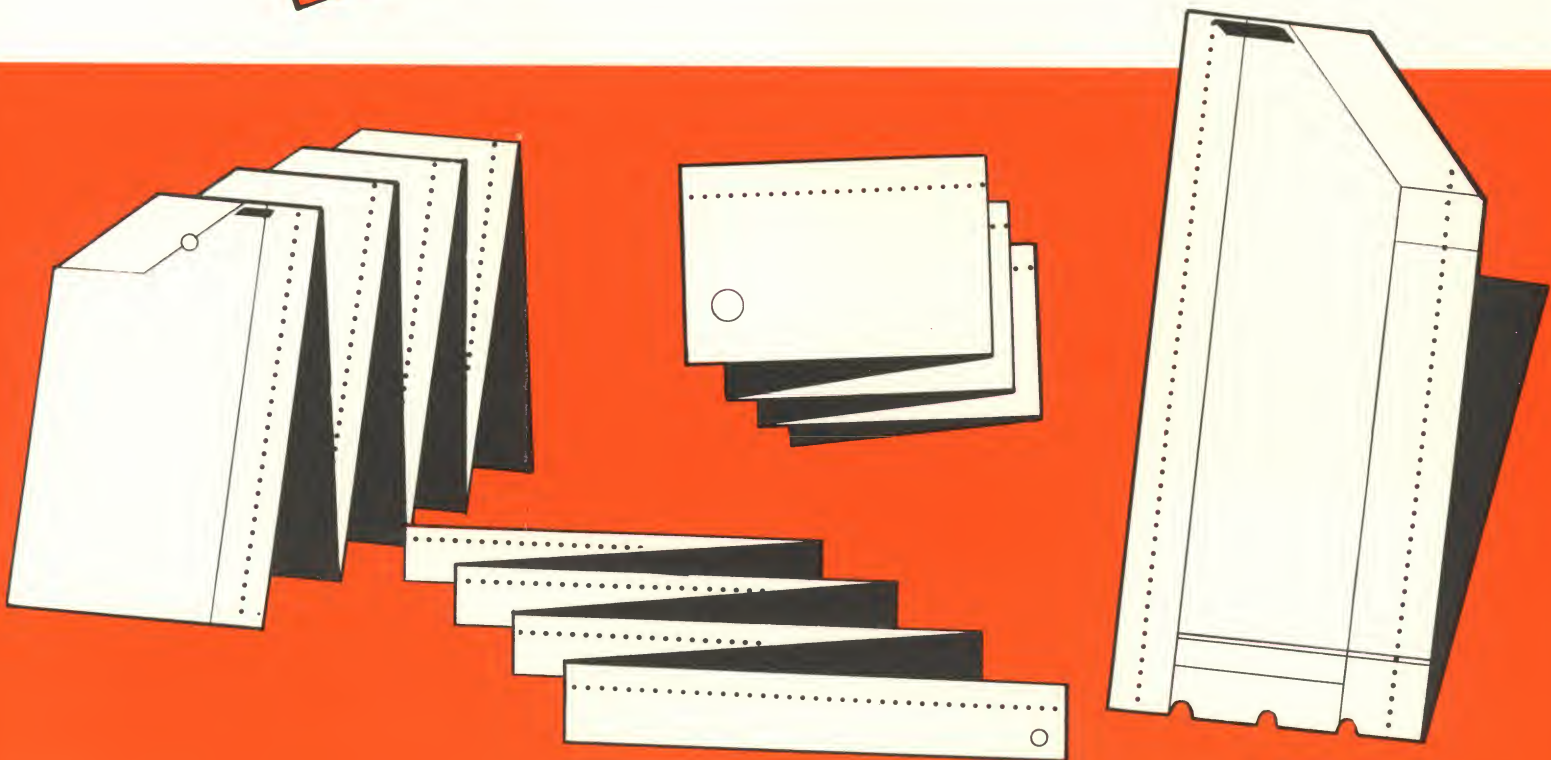

Tape clip board protects the roll in individual containers, each having an index label for easy identification.

EXACTLY What You Need - - Is Our Business

Acme Visible produces the widest variety of single or continuous-form edge-punched cards available . . . give us your specifications stating color and style, and a card will be designed in the width and length to include just the information you need. Often custom built cards can be filed more accessibly and are easier for the operator to handle.
